- **Interim venue of the Coburg State Theatre planned as an architectural highlight**
- **Façades, interior walls and ceilings made of wood**

Coburg, 5 July 2021 The timber construction works for the Globe Theatre in Coburg, a building ensemble consisting of four buildings, are entering the decisive phase as ZÜBLIN Timber begins work on the main building. The four buildings are connected by intermediate structures. ZÜBLIN Timber has already been carrying out the timber construction work on the ancillary buildings since mid-May.

The theatre will initially serve as an interim venue for the Coburg State Theatre, which is being completely renovated. In the long term, the new building will be used for a variety of different purposes.

The centre of the complex is a striking round timber hybrid building with some 5,100 m² of gross floor space distributed over five floors and one basement level. The three ancillary buildings have been designed as two-storey timber framed buildings offering a further total of almost 2,000 m² of gross floor space.

ZÜBLIN Timber realising all timber construction work

The team from ZÜBLIN Timber is handling all the timber construction works on the Globe Theatre, from workshop planning to the production and assembly of the timber elements and related tasks such as roof sealing. Around 3,400 m³ of LENO[®] cross-laminated timber, 400 m³ of glulam and 80 t of steel will be used. The contract is worth around € 6 million.

When completed, the main building of the theatre will count among the architectural highlights in the city of Coburg – above all thanks to the striking glued laminated timber louver façade covering the entire height of the building. The ancillary buildings will also be clad in wood. In total, ZÜBLIN Timber is producing 2,000 m² of timber façade for the project. The interior walls will also be fitted with wood while the approx. 1,450 m² of floor slabs will be built using a timber-concrete composite system.

The timber construction work on the main building is scheduled for completion by February 2022. Work on the ancillary buildings should finish by the end of August 2021.

ZÜBLIN Timber, a subsidiary of Stuttgart-based Ed. Züblin AG, stands for ambitious and pioneered solutions in the field of timber construction. We are a single-source provider for the development, production, delivery, and execution of high-quality timber construction systems – from simple structural frames to complex timber engineering to turnkey project execution. We work hand in hand with our clients to develop efficient solutions and a sustainable quality of life: www.zueblin-timber.com
